The Shen license

Shen is under a 3 clause BSD license from 2015.

Copyright (c) 2010-2015, Mark Tarver

All rights reserved.

This license appears in the file BSD.

This license applies to all derived versions of Shen, including all versions derived from the sources provided whatever the method of compilation and the object code generated. This is the reason for clause 2 in the BSD. Such derived works should carry the above license *on* those source files generated – or *with* the files if they are binary. Any original code specifically written by the programmer which not derived from the sources supplied is and *should be* copyrighted to that programmer. This work may be placed under any license of choice *except* GPL because of the viral condition (see next paragraph)

There is no legal right to relicense or sublicense BSD code or any derived version to another license (e.g. GPL). The power to place a license on a work belongs to the copyright holder.

A person does not assume copyright over a work by making a small change to it. Only if the change is substantial to be deemed intellectually significant can such a claim be made and then only over the change itself. Hence if changing code, if you wish to retain copyright over your changes and they are intellectually significant, offset these changes under your copyright.

The Shen Standard

The right to be accredited to the Shen standard is associated with the Shen logo according to compilation from the sources provided on www.shenlanguage.org and in conformance with the standard tests. Any port of Shen can be distributed under that title when it is derived from the sources provided and it passes the standard tests in the folder Test Programs. To carry out these tests, consult README.shen in that folder. If your port passes all the tests at 100% then you can pass the work to us for verification and we will certify it under the Shen logo and place it in the public download if you so wish.

This work is certified by www.shenlanguage.org
as derived from Shen 17 and conformant
to the Shen standard test suite 1.0
